

Office of the Director – Digital Portal
(“Transparency of process, not transparency of information.”)

SOFTWARE REQUIREMENT SPECIFICATION (SRS)

Director’s Office Portal (DOP) – Mid-Level Specification

1. INTRODUCTION

1.1 Purpose

This document outlines functional, data, UI, and workflow requirements for the Director’s Office Portal (DOP). It is intended to guide design, development, and stakeholder review while remaining concise and practical.

1.2 Scope

The system will:

- Manage Director’s schedule with confidentiality controls
- Handle meeting requests and approvals
- Track tasks and follow-ups (Kanban)
- Manage documents and communications
- Support visitor management
- Provide basic analytics and notifications

1.3 Stakeholders

- Director
- Secretary / PA
- Faculty & Staff
- External Visitors (limited)
- IT/Admin Team

2. OVERALL DESCRIPTION

2.1 Product Perspective

Web-based portal, optionally integrated with institutional ERP/email.

2.2 Core Modules

- Authentication & RBAC
- Dashboard
- Calendar & Scheduling
- Meeting Requests
- Tasks (Kanban)
- Documents
- Communication
- Visitors
- Notifications
- Reports

2.3 User Classes

Director

- Full access; view confidential details; approve high-priority items

Secretary

- Operational control; manages calendar, requests, tasks, visitors

Staff

- Submit requests; view limited information and statuses

Visitor

- Submit visit requests (optional)

3. ROLE-BASED ACCESS (SUMMARY)

Module	Director	Secretary	Staff
Calendar (Full Details)	✓	✓	✗
Calendar (Busy/Free)	✓	✓	✓
Meeting Requests (Approve)	✓	✓	✗
Tasks (Create/Assign)	✓	✓	✗
Submit Requests	✓	✓	✓
Confidential Notes	✓	✓	✗

4. DATA MODEL (KEY TABLES & FIELDS)

4.1 Users

- id (UUID)
- name (string, required)
- email (string, unique, required)
- role (enum: Director/Secretary/Staff)
- department (string, optional)
- status (active/inactive)

4.2 Events (Calendar)

- id (UUID)
- title (string, required)
- description (text)
- start_time (datetime, required)
- end_time (datetime, required)
- type (enum: Confidential/Internal/Public)
- visibility (private/public)
- created_by (user_id)
- participants (array/user_ids)

- notes (text, secret – hidden from staff)

Rules:

- end_time > start_time
- Prevent overlap for Director (hard block)

4.3 Meeting Requests

- id (UUID)
- requester_name (string)
- department (string)
- purpose (text, required)
- priority (enum: Low/Medium/High)
- preferred_date (date)
- preferred_time (time/range)
- attachment (file, optional)
- status (Pending/Approved/Rejected/Rescheduled)
- internal_notes (text, hidden)

4.4 Tasks

- id (UUID)
- title (string, required)
- description (text)
- assigned_to (user_id)
- deadline (date)
- status (Pending/In Progress/Completed)
- priority (Low/Medium/High)

4.5 Documents

- id, title, category, file_path, access_level (public/restricted/confidential), version, uploaded_by, date

4.6 Visitors

- id, name, organization, purpose, visit_date, approval_status, pass_generated

4.7 Notifications

- id, user_id, message, type, read_status, created_at

5. UI / SCREEN SPECIFICATIONS

5.1 Login

- Fields: Email, Password
- Actions: Login, Forgot Password

5.2 Dashboard (Secretary)

- Panels:
 - Today's Schedule (list)
 - Pending Requests (table)
 - Alerts (VIP/deadlines)

- Task Summary (counts)
- Quick Actions: +Event, +Task

5.3 Calendar

- Views: Month/Week
- Actions: Create/Edit/Delete event; drag to reschedule
- Staff View: only Busy/Available blocks

5.4 Meeting Requests

- Staff Form: name, department, purpose, priority, preferred slot, attachment
- Secretary List: filter by status/priority; actions Approve/Reject/Reschedule; add internal notes

5.5 Tasks (Kanban)

- Columns: Pending | In Progress | Completed
- Card: title, assignee, deadline, priority color
- Actions: drag & drop, add/edit task

5.6 Documents

- Folder/category view; upload; search; filter by access level

5.7 Visitors

- Submit request (staff/external)
- Secretary approves; generates pass; daily list

6. WORKFLOWS

6.1 Meeting Request

1. Staff submits request → status Pending
2. Secretary reviews → Approve/Reject/Reschedule
3. If Approved → create calendar event
4. Notification sent to requester

Edge Cases:

- Time conflict → suggest alternate slot
- High priority → notify Director

6.2 Scheduling

1. Secretary creates event
2. System checks conflicts
3. If valid → save; else prompt change

6.3 Task Management

1. Create task → assign user
2. Move across Kanban columns
3. Mark completed → notify creator (optional)

6.4 Visitor Flow

1. Submit visit request
2. Secretary approval

3. Generate pass → mark entry

7. NOTIFICATIONS

- Email/system alerts for:
 - Meeting approval/rejection
 - Upcoming meetings (reminder)
 - Task deadlines/overdue

8. SECURITY & CONFIDENTIALITY

- RBAC enforced at UI + API
- Confidential events hidden from Staff
- Internal notes not exposed in staff views
- Basic audit logging (login, approvals, edits)

9. REPORTS (BASIC)

- Requests by department
- Meetings per week/month
- Task completion status

10. NON-FUNCTIONAL REQUIREMENTS

- Performance: page load < 2 seconds (typical)
- Usability: simple, minimal clicks
- Availability: ~99% uptime
- Compatibility: responsive (desktop/tablet/mobile)

11. CONCLUSION

This mid-level SRS balances clarity and practicality, enabling quick design and development while maintaining essential controls for confidentiality and efficiency in the Director's office.

1. Core Design Principle: Role-Based Access Control (RBAC)

Create different access layers:

Roles

- **Director (Full Access)**
- **PS to Director (Operational Control)**
- **Internal Staff (Limited Access)**
 - Faculty Members
 - Non-Teaching Staff
 - Registrar
 - Dean/HoD (Head of Department)/Warden/Centre Lead/HoS (Head of Section)
- **External Visitors (Highly Restricted)**

This ensures:

- Sensitive schedules stay hidden
- Only necessary information is visible to each group

2. Portal Dashboard (PS to Director View – Main Control Panel)

This is the *heart* of the system.

Widgets to include:

- Today's schedule (editable)
- Pending requests
- Incoming communication (emails/letters)
- Priority alerts (VIP visits, deadlines)
- Tasks & reminders

3. Smart Scheduling System (MOST IMPORTANT)

Two-layer calendar system:

(A) Private Calendar (Director + PS to Director only)

- Full details:
 - Meeting agenda
 - Participants
 - Location
 - Notes
- Mark events as: (give colour coding)
 - Confidential (Red)
 - Internal (Yellow)
 - Public (Green)

(B) Public/Staff View Calendar

Only shows:

- “Available / Busy”

- Meeting request slots
- Approved official events

Do NOT show:

- Meeting purpose
- External visitors
- Strategic discussions

4. Meeting Request Management System

For faculty/staff:

- Submit meeting request with:
 - Purpose
 - Priority
 - Preferred time slots
 - Attach documents

Secretary view:

- Approve / Reject / Reschedule
- Add internal notes (hidden from requester)
- Tag requests (urgent, academic, admin, external)

Add auto-priority rules:

- Government/Accreditation → High priority
- Students → routed via proper channel first
- Faculty → if routing required, suggest the same to be routed via proper channel

5. Document & File Management

Categories:

- Official letters
- Policy documents
- Reports (NAAC, NBA, rankings)
- Confidential files (restricted access)

Features:

- Version control
- Tagging/search
- Access permissions

6. Communication Hub

Centralize all communication:

Includes:

- Email integration
- Letter tracking (inward/outward)

- Visitor correspondence

Workflow:

- Incoming → Logged → Tagged → Assigned → Closed

7. Visitor Management System

For external visitors:

- Pre-registration form
- Purpose of visit
- Approval workflow

Secretary dashboard:

- Visitor list for the day
- Security coordination
- Entry pass generation

8. Task & Follow-up Tracker

For Director's office efficiency:

- Assign tasks to:
 - Departments
 - Faculty
 - Admin staff
 - Other roles as mentioned above

Track:

- Deadlines
- Status (Pending / In Progress / Done)
- Escalations

9. Reports & Analytics

Help improve decision-making:

- Number of meeting requests
- Time utilization
- Department-wise interactions
- Pending vs completed tasks
- Others (TBD)

10. Workflow Automation

Automate repetitive work:

- Meeting confirmation emails
- Reminder notifications
- Follow-up alerts
- Document approvals

11. Confidentiality Controls (CRITICAL)

This is where most systems fail—be strict here.

Must-have controls:

- Role-based visibility
- “Confidential” tagging
- Hidden notes (only for secretary)
- Audit logs (who accessed what)
- Time-based visibility (auto-hide after event)

12. Staff Portal (Limited Interface)

What employees should see:

- Request meeting form
- Public announcements
- Approved circulars
- Status of their requests

Keep it **minimal and clean**—avoid clutter.

13. Optional Advanced Features (High Impact)

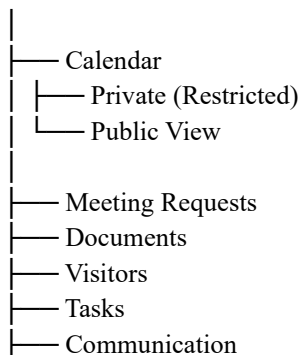

- AI-based scheduling suggestions
- Priority scoring of requests
- Voice notes for quick instructions

Common Mistakes to Avoid

- Showing full calendar to staff
- No approval workflow
- Mixing confidential and public data
- No tracking of requests
- Overcomplicated interface

Suggested Structure (Simple Sitemap)

Dashboard

Implementation Steps

PHASE 0: QUICK SETUP STRATEGY

To build fast:

- Use:
 - Frontend: React
 - Backend: Node.js (with REST APIs)
 - Database: MySQL
- Use ready modules for:
 - Authentication
 - Email/SMS notifications
- Build in modules, not all at once (order provided below)

STEP 1: ROLE-BASED ACCESS CONTROL (RBAC)

Goal: Control who sees what.

Roles

- Admin (give this access to the PS to Director)
 - User Management
 - Department Management
 - Role Management
- Director
- PS to Director
- Staff
 - Faculty Members
 - Non-Teaching Staff
 - Dean/HoD (Head of Department)/Warden/Centre Lead/HoS (Head of Section)
 - Registrar
- Visitor

Database Tables

users

- id
- name
- email
- role (Director / Secretary / Staff)
- department
- status (active/inactive)

roles_permissions

- role
- module_name
- can_view
- can_edit
- can_delete
- can_approve

UI

- Login Page
- Role-based redirect:
 - Director → Dashboard
 - Secretary → Control Panel
 - Staff → Request Portal

STEP 2: DASHBOARD (SECRETARY CONTROL PANEL)

Goal: Single screen to manage everything

Front Page Layout

Top Bar:

- Today's date
- Notifications bell
- Quick add button (+ Meeting / Task)

Main Sections:

Today's Schedule (left)

- Time
- Title
- Type (Confidential/Internal/Public)
- Status

Pending Requests (center)

- Request ID
- Name
- Purpose
- Priority
- Action buttons (Approve / Reject)

Alerts (right)

- VIP visits
- Deadlines

Tasks Summary

- Pending / Completed

STEP 3: SMART SCHEDULING SYSTEM

Table: events

- id
- title
- description
- start_time
- end_time
- type (Confidential/Internal/Public)
- created_by
- visibility (private/public)
- participants
- notes (SECRET FIELD)

UI

Secretary View:

- Full calendar (monthly/weekly)
- Click event → full details + edit

Staff View:

- Only shows:
 - Available / Busy
 - Bookable slots

Key Rule:

- Confidential events = hidden from staff

STEP 4: MEETING REQUEST SYSTEM

Table: meeting_requests

- id
- requester_name
- department
- purpose
- priority (Low/Medium/High)
- preferred_date
- preferred_time
- attachment
- status (Pending/Approved/Rejected)
- internal_notes (hidden)

UI

Staff:

Form fields:

- Name
- Department

- Purpose
- Priority dropdown
- Time slots
- Upload file

Secretary:

- List view with filters
- Buttons:
 - Approve
 - Reject
 - Suggest new time

STEP 5: DOCUMENT MANAGEMENT

Table: documents

- id
- title
- category
- file_path
- uploaded_by
- access_level (public/restricted/confidential)
- version
- upload_date

UI

- Folder view:
 - Policies
 - Reports
 - Letters

Features:

- Search bar
- Filter by category
- Version history

STEP 6: COMMUNICATION HUB

Table: communications

- id
- type (email/letter)
- sender
- subject
- date
- status (open/closed)
- assigned_to

UI

- Inbox style layout
- Filters:
 - Unread
 - Pending
 - Closed

STEP 7: VISITOR MANAGEMENT

Table: visitors

- id
- name
- organization
- purpose
- date
- approval_status
- pass_generated (yes/no)

UI

Secretary:

- Visitor list (today)
- Approve / Reject
- Generate pass

Staff:

- Submit visitor request

STEP 8: TASK & FOLLOW-UP TRACKER

Table: tasks

- id
- title
- description
- assigned_to
- deadline
- status
- priority

UI

- Kanban board (I think this will be a new term for you, search and read about it or else discuss with me, I will let you know):
 - Pending
 - In Progress
 - Completed

STEP 9: REPORTS & ANALYTICS

Data Sources:

- Meetings
- Tasks
- Requests

UI

- Charts:
 - Requests per department
 - Time utilization
 - Pending tasks

STEP 10: WORKFLOW AUTOMATION

Automations:

- Meeting approval → Email sent
- Reminder before meeting
- Task deadline alerts

Table: notifications

- id
- user_id
- message
- type
- read_status

STEP 11: CONFIDENTIALITY CONTROLS

Features:

- Hidden fields:
 - internal_notes
- Audit log

Table: audit_logs

- id
- user
- action
- module
- timestamp

STEP 12: STAFF PORTAL

Front Page

- Request Meeting button
- My Requests status
- Announcements

Minimal design:

- Avoid clutter

STEP 13: ADVANCED FEATURES

- AI scheduling
- Auto-priority scoring
- Voice notes

My Suggestion

Start with Only 3 modules: Requests + Calendar + Tasks, then expand. This avoids overbuilding and helps you launch quickly.
